

Product Description

DENZ Brass Valves are some of the most common types of valves utilize in plumbing, water well, Residential plumbing and HVAC applications. They are fairly easy to work with and easy to install and suit many applications where corrosion resistance is not a big problem.

Due to the popularity of brass valves, the products that are used for sealing them are very readily available. They are used in very wide range of applications.

The manufacturing styles of brass valves and Iron valves are pretty different. As DENZ Water Tech, we are not manufacturing the brass valves ourselves. But we are highly confident with our local partners who specialized in the manufacturing field of these products. DENZ Water Tech. supplies the brass items in order to complete the project packages worldwide.
